b) The following table depicts a sampled analog signal for digital signal representation. By applying the concept of Pulse Code Modulation, answer there will be 5 marks for each sampled amplitude. Show the normalized and quantized values for the given analog signal values at different time-slots. Assume that the sampling rate is between 20V to 120V.

Time	Analog Signal Value (V)
0	-5.3
1	9.4
2	15.7
3	-13.2
